**Project:   NanoGPT in JAX**

**Goal:**

                **124M params gpt with a good loss.**
                **Great structured code/Github Page**

**Steps :**

                **Watch the tutorial by Karpathy,**
                **Read the papers**
                **Document the libraries (Flax linen, TF dataset loaders…)**

**Promote:**

**LinkedIn**
**X**

**Focus on good design of posts.. No AI generate text (It just sucks)**
